■ 3mm Bleed

Anything in the red bleed area will be cut off. Please remember to extend any background colours or images into the bleed to avoid white lines appearing at the edge of your print during print finishing

□ Safe Area

Keep all of your text inside the white area. Please remember to use high resolution images of 300dpi for the best results

■ Trim

Your print will be cut along the white line. Any images or text in the 3mm area between the white line and the black line runs the risk of being cut off during print finishing
